Two Variable Statistics Colloquium

September 12, 2021

For this assignment you will conduct a simple exploratory data analysis on a dataset **of your choice**. You will display your analysis in a report and give a brief (5 minute) presentation to the class.

Your presentation **must** include:

- Visualization(s) and summary of a Simple Linear Regression analysis

You are encouraged to typeset your report in LaTeX, and create your plots using R Studio/Python. Many interesting datasets may be found on the website kaggle.

Presentations will be held in class (date posted on github). Reports are to be submitted **before class begins**.
